Specialties and examples of conditions treated through Ampla Health's Telemedicine Program for Adults and Pediatrics

What is Telemedicine?

Telemedicine visits use webcams to establish a live, interactive video connection between a patient at one location and a specialist at another. The visits allow for collaboration in developing a treatment plan between the patient, the patient's primary care provider, and the specialist.

Why Use Telemedicine?

- Increases access to specialty care for patients in rural areas.
- Collaborative effort between Primary Care Provider and specialist in developing the best care plan.
- Eliminates the need to travel long distances.
- May reduce waiting time.
- All insurance accepted including Medi-Cal, Medicare, CMSP, and most private insurance.

Certain restrictions may apply and wait times may vary by specialty request.
